

OITS GIS ACC CODE*

DESCRIPTION (Evidence Source)

0	No improvement, no confirmation
1	Point is confirmed on the correct road name or just a Google location, no other confirming data. When possible, the objective is to get this point as close to the assumed parcel as possible based on ALIS** address ranges.
1.1	Located the point
1.2	Moved (or placed) the point
5	Evidence does point to correct location, but less than definite
	Located the point
5.2	Moved (or placed) the point
5.1	Good evidence that location is correct with a small possibility of error
	Located the point
6.2	Moved (or placed) the point
6.1	All evidence confirms that location is correct
7.1	Located the point
7.2	Moved (or placed) the point

#.1 = Located: The point was located, there was no need to move it, or the location could not be improved

#.2 = Placed: If a point is moved, it is given a #.2 to show it's a different location than what was received

*OITS (NYS Office of Information Technology Services) GIS ACC Code (Accuracy code)

** ALIS – Road segments that have a Unique Identifier for that Segment.
